RAJU JONNADA

+91 8519993930| jonnadaraju27@gmail.com | LinkedIn | GitHub

Full stack Developer Fresher with hands-on experience in Python, FastAPI and RESTful API development and HTML, CSS and JavaScript. Strong understand of CRUD operations, HTTP methods, CORS and SQL databases. Comfortable working in Linux, using Git / GitHub and testing API's using Postman, cURL and http. Passionate about learning and building scalable backend systems.

TECHNICAL SKILLS

Languages: C Python, JavaScript
Frontend: HTML, CSS, React.js
Backend: FastAPI, Flask, RESTful API's, Request Validation, CRUD Operations, CORS
Database: SQLite, MySQL, PostgreSQL
Network Tools: Netcat, cURL, SSH, Port Forwarding, Domain Configuration
Tools: Git, GitHub, Linux, LLDB, PDB, VS Code, Postman
Core Concepts: HTTP Methods, Responsive Design, Website Deployment using Render, Vercel, Netlify

WORK EXPERIENCE

Bhabha Atomic Research Center | **Certificate** May 2024 – July 2024
Internship – Python *India*

- Developed a Convex & Concave Hull Model using python to analyze material defects with improved boundary precision.
- Integrated scikit-learn models to classify and visualize defect regions, increasing defect analysis accuracy by 20%.
- Conducted rigorous testing and validation, ensuring the model's reliability real-world datasets.
- Collaborated with scientists and engineers to deploy the model into existing inspection workflows.

PROJECTS

CITYBUS ADVISOR – Public Transport Advisory System | *FastAPI, PostgreSQL* **GitHub**

- Designed and developed a FastAPI based backend for a city bus advisory system enabling route based bus search and reral-time upcoming bus timings.
- Implemented efficient database modeling with normalized tables to manage buses and schedules, supporting time-aware and case-insensitive searches.
- Built advanced filtering and grouping logic to display bus-wise upcoming timings based on source, destination, bus type, and user preferences.
- Applied real-time logic to filter and group upcoming bus schedules, ensuring accurate and user-relevant results based on current time and route selection.

PROFILE BUILDER – Automated Student Portfolio Generator | *Python, HTML, CSS, JS* **GitHub**

- Built an automated profile generatorusing Python that creates individual student portfolio websites from CSV data and a reusable HTML template.
- Implemented template-driven static site generation, dynamically replacing placeholders to generate scalable, consistent profiles for 30+ students.
- Integrated QR-code–based profile access, enabling instant public viewing of student portfolios without login or authentication.

EDUCATION

B-Tech – Gayatri Vidya Parishad College of Engineering **|** Information Technology **| 76.95%** Mar 2025
Diploma – Sanketika Polytechnic College **|** Computer Engineering **| 70.43%** July 2021
School – N T School **| 88.35%** Apr 2018

CERTIFICATIONS

- Successfully deployed CityBus Advisor on Render, configuring backend services and public APIs to make the application accessible over the internet | **Link**
- Published final year project titled "Automated Detection and Mitigation of DDoS Attacks in Web Applications" in the Global Scientific Journal(ISSN 2320-9186), March 2025
